                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New motoneuronotrophic factor peptide analogue enhancing the viability motor neurons, useful for target muscle reinnervation, treating peripheral nerve injuries or neurodegenerative diseases and in wound
              The present invention relates to motoneuronotrophic factor peptide analogue, where the peptide analogue enhances the viability of motor neurons. The methods and compositions of the present invention are useful for promoting motor neuron viability and axon degeneration, target muscle reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence represents a MNTF motoneuronotrophic factor peptide analogue.

                                                                                                                                                                                                The present invention relates to motoneuronotrophic factor peptide analogue, where the peptide analogue enhances the viability of motor neurons. The methods and compositions of the present invention are us for promoting motor neuron viability and axon degeneration, target method reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence represents a MNTF motoneuronotrophic factor peptide analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Neuropeptide-Agonist;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       analogue, where the peptide analogue enhances the viability of motor neurons. The methods and compositions of the present invention are us for promoting motor neuron viability and axon degeneration, trarget my reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence represents a MNTF motoneuronotrophic factor peptide analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New motoneuronotrophic factor peptide analogue enhancing the viability motor neurons, useful for target muscle reinnervation, treating peripheral nerve injuries or neurodegenerative diseases and in wound
                                                 The invention relates to an isolated polynucleotide consisting of motoneuronotropic factor (MNTF)-associated nucleic acid sequence comprising AEA17647 or AEA17648, its fragment or complement. Also
                                                                                                                                                                                                                New isolated polynucleotide consisting of a motoneuronotropic factor (MNTF)-associated nucleic acid sequence, useful for promoting the survival, growth, proliferation and maintenance of mammalian neurons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Motoneuronotropic factor (MNTF)
                                                                                                                                                                                                                                                                                                                                       WPI; 2005-386358/39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-NOV-2003; 2003US-0518581P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08-NOV-2004; 2004WO-US038651
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       26-MAY-2005

The polynucleotides are useful for promoting the survival, growth, proliferation and maintenance of mammalian neurons. The present sequence represents a polypeptide encoded by an open reading frame of MNTF CDNA (see AEA17647), which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    frame of SEQ ID No. 1; a fusion protein comprising an MNTF associated polypeptide encoded by an open reading frame of SEQ ID no. 1 linked to heterologous protein; an expression vector operably linked to the isolated polynucleotide, where at least one open reading frame is operably linked to a control sequence compatible with a desired host vector; an isolated host cell transformed with the expression vector;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Motorneuronotrophic factor; MNTF-1; MNTF1-F6; human; axon regeneration; motoneuron; diagnose; treatment; disease; wound healing; scar tissue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human MNTF1-F6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 21
                                         This sequence, represents a fragment of a novel human motoneurotrophic factor, MNTF1-F6. Such factors are used to promote regeneration of the axon of a motoneurone, to diagnose and treat motoneurone disease in a mammal or to accelerate wound healing whilst concomitantly minimising inhibiting scar tissue and/or keloid formation in an area associated wound healing whilst concomitantly minimising inhibiting scar tissue and/or keloid formation in an area associated wound healing whilst concomitantly minimising in a second second with the second s
                                                                                                                                                                                                                                                                                                                                                                                        Motoneurotrophic factor MNTF1-F3 and MNTF1-F6 - regeneration, diagnosing or treating motoneuron wound healing without scar formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-SEP-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                             The invention relates to a method for promoting the survival, growth, proliferation or maintenance of mammalian neurons by administering motoneuronotrophic factors (MNTF). The method is useful for treating peripheral nerve injuries, musculoskeletal disorders, spinal cord injuries, head injuries, strokes, neuromuscular degenerative diseases, amyotrophic lateral sclerosis, spinal muscular atrophy, peripheral neuropathy, diabetic peripheral neuropathy, peripheral neuropathy resulting from AIDS or radiation therapy for cancer, multiple sclerosis, muscular dystrophy, inhibition of scar formation, myasthenia gravis and sensory neuronal function disorders. The present sequence is human MNTF1-F6 protein used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           peripheral nerve injury; musculoskeletal disorder; spinal cord injury; head injury; stroke; neuromuscular degenerative disease; nootropic; amyotrophic lateral sclerosis; peripheral neuropathy; neuroprotective; muscular dystrophy; AIDS; spinal muscular atrophy; multiple sclerosis; sensory neuronal function disorder; vulnerary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAO29914 standard; protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 33
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           administered at a concentration of 5 ng-50 mg, whereas for inhibiting hereditary motoneurone disease, the dosage is 5-100 (especially 30-50)ng
                                                                                                                                                                                                                                              Promoting the survival, growth, proliferation or maintenance of neurons by administering motoneuronotrophic factors, useful for musculoskeletal and neurodegenerative disorders and spinal cord
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human motoneuronotrophic factor (MNTF)1-F6 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-SEP-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to motoneuronotrophic factor peptide analogue, where the peptide analogue enhances the viability of motor neurons. The methods and compositions of the present invention are useful for promoting motor neuron viability and axon degeneration, target muscle reinnervation, treating peripheral nerve injuries, treating neurodegenerative disease and in wound healing. The present sequence represents MNTF1-F6 33 mer motoneuronotrophic factor peptide analogue.

                                                                                                                                                                                                                                                                                                                                                                                 Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by A acnes. The disorders include SAPHO syndrome (synovitis, acne, CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CC P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC specific for P. acnes proteins. These antibodies can be used to CC downregulate expression and activity of P. acnes proteins determining P. acnes proteins may also be used as CC diagnostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was CC obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                   CC encoding a Propionibacterium acnes protein. The invention also relates to CC polypeptides encoded by the polynucleotides (ABM35624-ABM6436) and to cadditionally encompasses expression vectors and host cells comprising a polypeptides. The invention CC additionally encompasses expression vectors and host cells comprising a copynucleotide of the invention; antibodies against polypeptides of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising polypeptide of the invention; a come to the invention; a comprising polypeptides of the invention; a comprising polypeptides of the invention; a come to the invention; a comprising polypeptides; a method for a polypeptides, comprising polypeptides, comprising polypeptides, compared comprising polypeptides, composition (comprising polypeptides, compared composition (comprising polypeptides, compared composition); a method and kit for detecting or determining the presence or absence of p. acnes in a comparison. The p. acnes polypeptides, polypucleotides, antibodies, fusion proteins, determining the development of p. acnes in a comparison. The p. acnes polypucleotides, polypucleotides, antibodies, fusion proteins, determining an immune response specific for a p. acnes composition. The polymucleotides can also be used as probes or primers for concleic acid hybridisation. The vaccine composition is useful for the comparison of an immune response specific for a p. acnes composition is useful for the comparison of an immune response specific for a p. acnes comparison. The present composition is useful for the comparison of a c

A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (BLISA). Note: The sequence data for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

                                                                                                                                                                                                                                                                                                                        CC polynuclectide of the invention; antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a commetted for a protein and the invention; a commetted for a protein and a solated T cell population comprising T cells prepared CC polypeptide and an isolated T cell population comprising P. acnes polypeptides, comprising P. acnes in a comprision of P. acnes in a comprision of P. acnes in a comparison of the presence or absence of P. acnes in a comparison of the p. acnes polypeptides, polypeptides, antibodies, fusion comprisions. The P. acnes polypeptides, polypucleotides, antibodies, fusion comprisions. The proteins of comprisions or antigen presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acnes composition. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the composition of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present composition is contained within the P. acnes polymucleotides of the contained within the P. acnes polymucleotides of t

cc encoding a Propionibacterium acres protein. The invention also relates to complypeptides encoded by the polynucleotides (ABM3524-ABM6435) and to complypeptides encoded by the polynucleotides. The invention additionally encompasses expression vectors and host cells comprising a polypeptide of the invention; an immuner response specific for a p. acres or invention; a this method; a vaccine composition proteins, or comprising a polypeptide of the invention; a compression proteins comprising a polypeptide of the invention; a complete the invention; a complete the invention; a composition comprising p. acres polypeptides, antibodies, antibodies, fusion proteins, T cell populations, or comparising p. acres polypeptides, composition (comprising p. acres polypeptides, comparising p. acres in a comparisint; and a method for inhibiting the development of p. acres in a composition; and a method for inhibiting the development of p. acres in a composition. The p. acres polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the collypeptides are useful for diagnosing, preventing or treating acres consistent. The polynucleotides can also be used as probes or primers for configuration of an immune response against p. acres in p. acres in a composition of an immune response against p. acres or primers for composition of an immune response against p. acres, or for treating acre, can determine the development of p. acres in a consequence represents a specifically claimed p. acres or primers for the printed specification, but was contained in electronic format directly from WIPO at the printed specification, but was contained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Zhang Y,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.                                                                                                                                                                                                                       á
                                                                                                                                                                                                                                                                                                                                       CC Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia CC pneumoniae (etrain CWLO29), and ABL91184-ABL91373 represent DNA encoding Ct them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia CC pneumoniae is a common cause of respiratory disease in humans, and is CC also involved in the development of cardiovascular diseases such as CC atherosclerosis, coronary artery disease, carotid artery stenosis, CC myocardial infarction, cerebrovascular disease, aortic aneurysm, CC claudication and stroke. The proteins and nucleic acids of the invention CC may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of CC chlamydia pneumoniae, and the nucleic acids may be used in pCR, branched CC pneumoniae gene expression. The present sequence represents a cCC (Updated on 29-AUG-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                             encoding a polypeptide whose expression is inhibited by the antisense controlled acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for consider the gene product or that has an activity against a biological pathway of the gene product or that has an activity against a biological pathway of centifying a gene required for cellular proliferation or the biological pathway of identifying a gene required for cellular proliferation or the biological pathway or a gene on which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent convenient of the strains; or (13) identifying the target of a compound that inhibits the gene proliferation of an organism. The antisense nucleic acids are useful for identifying the target of a compound that inhibits the gene proliferation of an organism. The antisense nucleic acids are useful for identifying the target of a compound that inhibits the gene proliferation of an organism. The antisense nucleic acids are useful for identifying the target of a compound that inhibits the gene proliferation of an organism. The antisense nucleic acids are useful for identifying the carget of a compound that inhibits the gene proliferation of an organism. The antisense nucleic acids are useful for identified acids are useful for identified acids are useful for identified acids.

                                                                                                                                                                                                                                                         The invention relates to a polypeptide for use as an autotransporter cantigen. Also provided is a method of eliciting an immune response in an individual which involves administering to the individual an Chlamydia pneumoniae autotransporter protein selected from Cpn0794, Cpn0795. Cpn0795, or Cpn0799 or an immunogenic fragment. The polypeptide is secreted into the cytoplasm of the host cell through a Crype v autotransporter secretion system mechanism. The polypeptide is useful as an antigen for raising a C. pneumoniae specific immune response in an cresponse. It is also useful for raising a systemic immune response in an Crype valual infected with C. pneumoniae. The polypeptide is diagnosis. It can also be used in the preparation of a medicament for the prevention or treatment of a C. pneumoniae infection in an individual. It can also be used as an autotransporter confection which immunoreacts with seropositive serum of an individual infected with C. pneumoniae. The preparation of an individual in the preparation of an individual in the preparation of an autotransporter confection which immunoreacts with seropositive serum of an individual in the preparation of an autotransporter content which content is the preparation of an individual in the preparation of an autotransporter content in the preparation of an individual in the preparation of an individual in the preparation of an autotransporter content in the p

                                                                                                                                                    CC having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC homologous recombination, modified seed oil or protein yield and/or CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved plant growth and development under at least one stress croduction. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPTO at sequence.html.

The method is used to confirm/deny the hypothesis that proteins are homologous and related methods are used to identify mutations during divergent evolution of proteins, to identify in vitro properties of proteins that are important for physiological activity and to generate genome-sized databases. The present sequence is Escherichia coli 6-phospho-strand-glucosidase (EC 3.2.1.86). This sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for excluding homology between two protein families. The method involves constructing models for secondary structural elements for each family, aligning secondary structural elements for each family structural elements from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent and the form part of the present sequence wherever the process of the sequence of the process of the pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes
                                                                                                                                                                                                                                                                                                                                                                                                                                           Recombinant DNA construct; transformed plant; improved plant cold tolerance; heat tolerance; drought tolerance; herbicide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      did not form part of the printed specification, electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides for the identification and antibiotics, comprise sequences of antisense nu

                                                                                                             comprising the recombinant DNA construct and a method of producing a crop plant of transformed plant having an improved property. The plant is a crop plant comprising the recombinant DNA construct and a method of producing a crop plant comprise or soybean. The method of producing a transformed plant component plant comprises transformed plant with the crop plant comprises transformed plant with the crop plant properties and growing the transformed plant with the component plant properties the transformed plant with the component plant properties. The recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plant properties. The recombinant DNA construct is useful for producing plant properties. Increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of the cell cycle pathway with plant growth regulators, increased rate of the component properties and/or uptake, by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth as bacterial polypeptide used in the growth form part of the printed specification but was obtained in electronic form part for the grinted specification but was obtained in electronic confirmance html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant DNA construct comprising a promoter positioned to provi
for expression of a polynucleotide encoding a polypeptide from a
microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (CAOY/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         of Pseudomonas species using biochip technology. Sequences ABO67026-ABO64396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at segdata.uspto.gov/sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The
                                                                         involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in readical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The compensation of polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic gamino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the treatment, prevention and diagnosis of medical conditions caused by CP acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. CP acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory CP lesions associated with acnes vulgaris. A method for detecting the CP resence or absence of P. acnes in a patient comprises contacting a condition of any condition of the invention and determining the amount of bound protein in the sample. The CP collection of antibodies and determining the amount of bound protein in the sample. The CP collectific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and CP chief of the acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by contact at a contact at the contact and the contact as a contact and the contact as a contact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

The propulations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acnes complypeptides are useful for diagnosing, preventing or treating acnes contains. The polynucleotides can also be used as probes or primers for concleic acid hybridisation. The vaccine composition is useful for the composition is useful for the composition of an immune response against P. acnes, or for treating acne, contained within the P. acnes polynucleotides of the comparison. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  encoding a Propionibacterium acnes protein. The invention also relates of polypeptides encoded by the polypucleotides (ABM3654-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a polypucleotide of the invention, antibodies against polypeptides of the polypeptides of the invention, antibodies against polypeptides of the polype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC human secreted proteins, and encode the proteins given in AAY01026 to AAY12260, respectively. The proteins given in AAY01026 the proteins given in AAY010260 and CC AAY11994 to AAY12260, respectively. The proteins given represent the CC signal peptide and an N-terminal fragment of a secreted protein. The CC nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell cyroliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, namentopoiesis regulating cregulating activity, receptor/ligand activity, anti-inflammatory cativity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide into a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an isolated nucleotide fragment (I) C comprising a nucleic acid sequence (NS) chosen from a NS encoding a CC polypeptide (PP) having receptor-like protein kinase activity, mitogen CC activated protein (MAP)-kinase activity, LIPIS-like transcription factor activity and CKC-like transcription factor activity. Also described: (I) CC complement (II) of (I); (2) a chimeric construct (III) comprising (I) or CC (III), operably linked to a regulatory sequence; (3) a plant (IV) CC comprising (III) in its genome; (4) seeds (V) obtained from (IV); and (5) CC comprising time of the pression in a transformed plant. (III) is useful for CC constant time or co-suppression in a transformed plant. (III) is useful for CC canola, Brassica, sorghum, sunflower or coconut. (III) is also useful for CC creating transgenic plants having altered lipid profiles. (I) can also be CC used as a hybridisation probe. ACC00626 to ACC00868 and ABR40591 to invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         comprising a nucleic acid sequence (NS) chosen from a NS encoding a polypeptide (PP) having receptor-like protein kinase activity, mitogen activated protein (MAP)-kinase activity, LIPIS-like transcription factor activity, caleosin-like activity, ATP citrate lyase activity, SNF1-like cativity, and CKC-like transcription factor activity. Also described: (1) complement (II) of (I); (2) a chimeric construct (III) comprising (I) or (II), operably linked to a regulatory sequence; (3) a plant (IV) or (II), operably linked to a regulatory sequence; (3) a plant (IV); and (5) comprising (III) in its genome; (4) seeds (V) obtained from (IV); and (5) coil obtained from (V). (I) or its part came be used in antisense (C inhibition or co-suppression in a transformed plant. (III) is useful for altering the oil phenotype in a plant such as corn, soybean, wheat, rice, canola, Brassica, sorghum, sunflower or coconut. (III) is also useful for creating transgenic plants having altered lipid profiles. (I) can also be used as a hybridisation probe. ACC00626 to ACC00868 and ABR40591 to a profile of the present sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                          This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX00602) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AAX00611-X00724; amino acid sequences AAW67807-W68004) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypucleotides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 87 polynucleotides, based on which tissues they are most highly expressed in (see AAX00611 for described uses)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-MAY-1997;

Alloiococcus

Alloiococcus otitidis; antigenic protein; immunogenic; immunisation;

Gram-positive bacterium; infection

otitis antigenic protein SEQ ID NO:480.

(first entry)

```
CC expression vector comprising the novel isolated polynucleotide (1), its complement, degenerate variant or fragment; (3) a genetically engineered (2) (2) an antibody specific for the polypeptide of (1); (5) an immunogenic (4) an antibody specific for the polypeptide of (1); (5) an immunogenic (5) (6) a pharmaceutical composition comprising the polypeptide, its complement, biological (5) (6) a pharmaceutical composition comprising the polypeptide of (1) and a carrier; (7) a protein chip comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) (6) a pharmaceutical composition comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) (7) a protein chip comprising an array of the polypeptides of (1), their biological equivalent or fragment; (8) (8) immunising against Alloicoccus otitidis by administering to a host the contitudes in the biological sample; (10) a kit comprising a container (8) (9) detecting and/or identifying Alloicoccus otitidis in the biological sample; (10) a kit comprising a container (10) or the antibody of (4); and (11) producing a polypeptide by culturing the genetically engineered host cell under conditions suitable to produce the polyputides, polypeptides, antibodies and compositions of the present convention can be used for treating and diagnosing diseases, drug (10) screening assays and monitoring of effects during drug clinical trials. The present sequence represents an Alloicoccus otitidis outlidis. The present sequence represents an Alloicoccus otitidis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes an isolated polynucleotide (I) of Alloiococcus ottitidis genomic DNA, which encodes an antigenic protein. Alloiococcus ottitidis is a Gram-positive bacterium. Also described: (1) an isolated polypeptide that is encoded by the polynucleotide (I); (2) an expression vector comprising the novel isolated polynucleotide (I); its complement, degenerate variant or fragment; (3) a genetically engineered host cell, transfected, transformed or infected with the vector of (2); (4) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the notward of the composition of the polypeptide of (1); (5) an immunogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring effects during drug clinical trials.

                This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAX00602) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 87 novel genes and their fragments (nucleic acid sequences: AAX00611-X00724; amino acid sequences AAA67807-M68004) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypucleotides. Specific uses are described for each of the 87 polynucleotides, based on which tissues they are most highly expressed in a sample or any second contact in the second cont
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           developmental abnormality; foetal deficiency; blood; allergy; renal; immune system; asthma; lymphocytic disease; brain; hepatic; lymphoma; inflammation; ischaemic shock; Alzheimer's disease; restenosis; AIDS; cognitive disorder; schizophrenia; prostate; obseity; osteoclast; thymus; osteoporosis; arthritis; testis; lung; thyroiditis; thyroid; digestion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             30-MAY-1997

Alternatively the method comprises detecting binding of a ligand to a polypeptide encoded by one or more of the above nucleotide sequences. The methods are useful for detecting microsatellite instability in an individual, for identifying colon tissue having microsatellite instability, for monitoring the onset,
                                                                                                                                                                                                                                                                                                                                                                                                                                   progression, or regression of cancer or a pre-malignant condition in a subject. for determining prognosis for cancer or a pre-malignant condition in a subject. The nucleotides and polypeptides are useful for determining the efficacy of a test compound or a therapy for inhibiting cancer in a subject and for selecting a composition for inhibiting cancer in a subject and for selecting a composition for inhibiting cancer in a subject. The compound, composition and method are useful for treating cancer. This sequence is a protein encoded by a marker DNA sequence specific for a high degree of microsatellite instability (MSI-H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for monitoring the onset, progression, or regression of cancer or a pre-malignant condition, particularly colorectal cancer, in an individual, comprising detecting microsatellite

The nucleic acid sequence capable of controlling expression is a seed-preferred or constitutive promoter such as a phaseolin promoter and a ubiquitin promoter. The chimeric nucleic acid construct additionally comprises a nucleic acid sequence encoding a stabilizing polypeptide linked in frame to the sequence encoding apolipoprotein. It is a plant-specific oil body protein or a thioredoxin (SEQ ID NO: 56). The oil body protein is selected from oleosin, caleosin, and steroleosin. The non-
                                                                                                                                                                                                                                                                                                                                                                                                                            plant specific stabilizing polypeptide is a green fluorescent protein (SEQ ID NO: 57) or a single chain antibody. The single-chain antibody is capable of facilitating purification of appolipoprotein expressed in seeds or is capable of specifically associating with an oil body protein.

Alternatively, the single-chain antibody is a single-chain Fv antibody (SEQ ID NO: 240) capable of associating with the 18 kDa oleosin from A. thaliana (D9scFv). The pharmaceutical apolipoprotein formulation may be used to treat vascular diseases, such as therosclerosis. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expression in plant cells; and a sequence encoding an apolitopprotein polypeptide; introducing the chimeric nucleic acid construct into a gcell; and growing the plant cell into a mature plant where the plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Expressing apolipoprotein in plants which may be used for treating vascular diseases, comprises introducing a chimeric nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-NOV-2003; 2003US-0519606P.

                                                                                                                                                                                                                                                                                                                                                                                                                                   activated protein (MAP) kinase activity, LIPIS-like transcription factor activity, caleosin-like activity, ATP citrate lyase activity, SNP1-like activity and CKC-like transcription factor activity. Also described: (1) complement (II) of (I); (2) a chimeric construct (III) comprising (I) or (II), operably linked to a regulatory sequence; (3) a plant (IV) comprising (III) in its genome; (4) seeds (V) obtained from (IV); and (5) oil obtained from (V). (I) or its part can be used in antisense inhibition or co-suppression in a transformed plant. (III) is useful for altering the oil phenotype in a plant such as corn, soybean, wheat, rice, canola, Brassica, sorghum, sunflower or coconut. (III) is also useful for creating transgenic plants having altered lipid profiles. (I) can also be used as a hybridisation probe. ACC00626 to ACC00868 and ABR40591 to ABR40879 represent sequences used in the exemplification of the present

                                                                                                                                            5
                                                                                                                                                                                                                                      CC polynucleotide consisting of a sequence encoding an amino acid sequence cavailable in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide cof the invention are also useful in physical arrays of molecules and as comproving plant tolerance to cold, heat, drought, herbicides, extrame combination conditions, pathogens or pests, for manipulating growth rate in concreased resistance to plant disease, for manipulating growth rate in cold increased resistance to plant disease, for producing galactomannan, cc lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake cor by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert of invention.

                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                   Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                    patent did not appear in the printed specification,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mappi and in recombinant production of (II). The polymucleotides are also in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed in diagnostics as expressed sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 20; SEQ ID NO 37522; 103pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          biodiversity

                                                                                                                                                                                                                                                                                                                                                 The present invention relates to methods for expressing apolipoprotein in CC plants by introducing a chimeric nucleic acid construct into a plant Ccell. Specifically, this comprises providing a chimeric nucleic acid construct comprising a nucleic acid sequence capable of controlling CC construct comprising a nucleic acid sequence encoding an apolipoprotein plant cells; and a sequence encoding an apolipoprotein compression in plant cells; and a sequence encoding an apolipoprotein cell; and growing the plant cell into a mature plant where the plant CC cul; and growing the plant cell into a mature plant where the plant CC expresses apolipoprotein. Also disclosed is a composition of substantially pure apolipoprotein obtained from a plant. The CC pure oil bodies comprising an apolipoprotein obtained from plants. The CC pure oil bodies comprising an apolipoprotein obtained from plants. The CC comprises a nucleic capable of controlling expression is a seed-CC preferred or constitutive promoter such as a phaseolin promoter and a CC ubiquitin promoter. The chimeric nucleic acid construct additionally CC comprises a nucleic acid sequence encoding a stabilizing polypeptide CC linked in frame to the sequence encoding a stabilizing polypeptide CC inked in selected from oleosin, caleosin, (SEQ ID NO: 56). The non-CC plant specific stabilizing polypeptide is a green fluorescent protein CC (SEQ ID NO: 57) or a single chain antibody. The single-chain antibody is capable of facilitating purification of apolipoprotein expressed in seeds or is capable of specifically associating with an oil body protein. CC (SEQ ID NO: 240) capable of associating with an oil body protein. CC (SEQ ID NO: 240) capable of associating with an oil body protein. The pharmaceutical apolipoprotein formulation may be used to treat vascular diseases, such as atherosclerosis. The present consecuence is a thale cress caleosin protein sequence.

Specifically, this comprises providing a chimeric nucleic acid construct comprising a nucleic acid sequence capable of controlling expression in plant cells; and a sequence encoding an apolipoprotein polypeptide, introducing the chimeric nucleic acid construct into a plant cell; and growing the plant cell into a mature plant where the plant expresses apolipoprotein. Also disclosed is a composition of substantially pure apolipoprotein obtained from a plant, or substantially pure oil bodies comprising an apolipoprotein obtained from plants. The nucleic acid sequence capable of controlling expression is a seed-preferred or constitutive promoter such as a phaseolin promoter and a ubiquitin promoter. The chimeric nucleic acid construct additionally
                                                                                                                                                                                                                                                                                                                 comprises a nucleic acid sequence encoding a stabilizing polypeptide linked in frame to the sequence encoding apolipoprotein. It is a plant-specific oil body protein or a thioredoxin (SEQ ID NO: 56). The oil body protein is selected from oleosin, caleosin, and steroleosin. The non-plant specific stabilizing polypeptide is a green fluorescent protein (SEQ ID NO: 57) or a single chain antibody. The single-chain antibody is capable of facilitating purification of apolipoprotein expressed in seeds or is capable of specifically associating with an oil body protein. Alternatively, the single-chain antibody is a single-chain from A. Stabiliana (1995CFV). The pharmaceutical apolipoprotein formulation may be used to treat vascular diseases, such as atherosclerosis. The present sequence is a thale cress caleosin protein sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Expressing apolipoprotein in plants which may be used for treating vascular diseases, comprises introducing a chimeric nucleic acid construct into a plant cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Apolipoprotein; expression; transgenic plant; pharmaceutical; vascular disease; atherosclerosis; vasctropic; antiarteriosclerotic;

                                                                                                                                            맑
                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and polypeptide (II) csequences. (I) is useful as hybridisation probes, polymerase chain creaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed used cin diagnostics as expressed sequence tags for identifying expressed used conditions and the polynucleotides are also used cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a completion in tissue, as molecular weight markers and as a food completion of the expressing (II). (I) and (II) are useful for treating disorders convolving aberrant protein expression or biological activity. The composible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this cameno activity from the printed specification, but was obtained in celetronic format directly from MIPO at

                                                                                                                                                                                                        polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                genes. (1) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also use in diagnostics as expressed sequence tags for identifying expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity.

CC comprising the recombinant DNA construct and a method of producing a crop plant comparising the recombinant DNA construct and a method of producing a crop plant construct and specific as the plant is a crop plant construct and property. The plant is a crop plant converged as the property of producing a transformed plant construct and growing the transformed plant, where the complynucleotide or polypeptide is useful for improving plant, where the construct is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with the construct is useful for producing plants with the construct is useful for producing plants with the construct is useful for producing plants with construct producing plants with plant growth regulators, increased rate of the cell cycle pathway with plant growth regulators, increased rate of condition, improved yield by modification of carbohydrate, nitrogen or content, improved yield by modification of carbohydrate, nitrogen or condition, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved lighth production or improved galactomanan construction. Note: The sequence carial polypeptide used in the growth from HEBPTO at gendard near conformation but was obtained in electronic form part form HEBPTO at gendard near conformation but was obtained in electronic conformation.

                                                                                                                        밁
                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                               cc genes. (I) is useful in gene therapy techniques to restore normal cc activity of (II) or to treat disease states involving (II). (II) is considered in tissue, as molecular weight markers and as a food cc golypeptide in tissue, as molecular weight markers and as a food cc supplement. (II) and its binding partners are useful in medical imaging consistes expressing (II). (I) and (II) are useful for treating disorders convolving aberrant protein expression or biological activity. The cc polypeptide and polynucleotide sequences have applications in convolving aberrant protein expression or biological activity. The cc polypeptide and polynucleotide sequences have applications in convolving aberrant protein expression or biological activity. The cc and to produce other types of data and products dependent on DNA and can be produced other types of data and products dependent on DNA and camino acid sequences. ABG00010-ABG30377 represent novel human diagnostic camino acid sequences of the invention. Note: The sequence data for this camino acid sequences of the printed specification, but was obtained in content of the printed specification of the sequence data for this camino acid sequences of the printed specification, but was obtained in content content this part camino acid sequences of the printed specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also use in diagnostics as expressed sequence tags for identifying expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          30-MAR-2001; 2001WO-US008631.

Also disclosed are the nucleic acid molecules encoding the proteins ar antibodies that specifically bind to the proteins. The composition comprising the protein, nucleic acid or antibody is useful for the manufacture of a medicament for treating or preventing N. gonorrhoeae infection, this may be in the form of a vaccine or gene therapy. Sequences given in records ABP76736-ABP81046 represent nucleic acid molecules of the invention
The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of
                                                                                                             Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New protein from Neisseria medicament for treating or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                The present sequence represents a zebrafish alphalC subunit of a voltage-dependent I-type calcium channel. The specification describes a method for determining whether a test subject has or is at risk of developing a disease or condition related to the alphalC subunit. The method involves analysing a nucleic acid molecule sample from the test subject to determine whether the test subject has a mutation in a gene encoding the alphalC subunit, where the presence of a mutation indicates that subject has or is at risk of developing the disease. The method is useful for determining whether a test subject (preferably mammal e.g. human) has, or is at risk of developing, a disease or condition related to the alphalC, is a trisk of developing, a disease or condition related to the alphalC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining whether a subject has or is at risk of developing disease related to alphalC subunit of voltage-dependent L-type calcium channel, by detecting mutations in genes encoding the subunit in sample of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Danio rerio.
